What is Interoperability

Interoperability in practical terms

"interoperability is the ability of different systems and applications to communicate, to exchange information accurately, effectively, and consistently, and to use the information that has been exchanged"

What information? - ███████████████████
Among whom? - ███████████████████████

Interoperability:
The ability of ████████████████ to exchange
and to use them for consistent management of external borders of the EU

████████████ which should be targeted by different states and/or armonized manner and with ███████████████

We speak the same language - **Common modeling language / syntax**

We understand the same concepts - **Common glossary of terms**

We present information in the same manner - **Common product structure**

We share information - **Common platform / network**

But more importantly...

We build common knowledge together - **Network + Working Group**
