### **Executive summary**

Almost **7 billion searches were performed by Member States** in SIS II in 2021

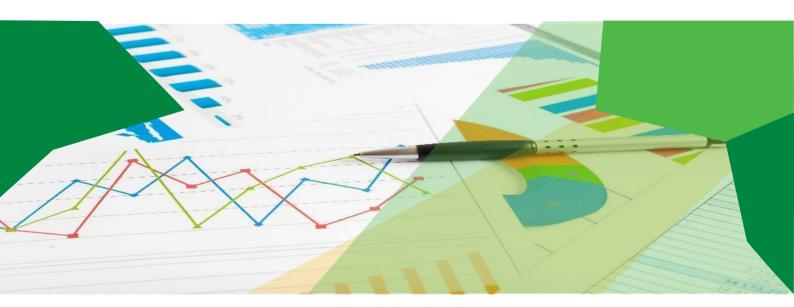

At the end of December 2021, there were **89.99 million** data/alerts stored in SIS II

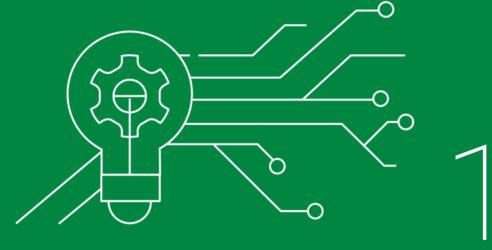

In 2021, the **SIRENE Bureaux reported 222,967** hits on foreign alerts

## ACCESS TO SIS II

## 1. Access to SIS II

In 2021 there were a total of **7,007,752,379 accesses to SIS II by Member States**<sup>1</sup>. This represented an **increase of 88% compared to 2020** when, in particular, searches were heavily impacted by the restriction of activities imposed by the COVID-19 crisis. Comparing to 2019 pre-COVID-19 levels, accesses increased by 5%.

A breakdown of accesses per Member State is provided in Figure 1.

Two type of accesses are possible:

**Searches** (queries) made against the central SIS II or a national copy of the SIS II, regardless of whether or not there was a hit. Member States without a national copy, and therefore searching only the central SIS II are Denmark, Finland, Liechtenstein, Norway and Slovenia. In addition, in 2021 Austria, Belgium, Bulgaria, Croatia, the Czech Republic, Germany, Greece, Hungary, Iceland, Italy, Latvia, Lithuania, Luxembourg, the Netherlands, Poland, Portugal, Romania, Slovakia, Sweden, Spain and Switzerland partially used the central SIS II for alphanumeric searches. This data is reported by Member States on a yearly basis.

In 2021, there were 6,991,349,311 searches performed by the Member States.

**Operations** performed in order to **create** and **manage alerts** - update, deletion or change of expiry date. This data is retrieved from the central SIS II.

In 2021, there were over 16 million operations in terms of alert management, which is in line with the amount of operations registered in 2020. However, the number of operations is still far from the pre-COVID-19 levels, when over 26 million were performed in 2018 and over 28 million in 2019.

Since March 2018, in addition to alphanumeric searches, it is possible to perform **AFIS searches** against central SIS II. These searches are performed against the central system, and allow the identification of a person based on fingerprints stored in SIS II.

The number of Member States using this functionality is increasing. In 2021, AFIS searches were regularly performed<sup>2</sup> by Austria, Belgium, Bulgaria, Croatia, the

Czech Republic, Denmark, Germany, Greece, Hungary, Iceland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, the Netherlands, Portugal, Romania Slovakia, Slovenia, Spain, Sweden, and Switzerland.

In absolute terms, the Member State accessing SIS II the most in 2021 was the Netherlands (with almost 37% of the total access to the system), followed by France (12%) and Spain (9%).

<sup>&</sup>lt;sup>1</sup> Europol and Eurojust within their respective mandates, also access and search data directly in SIS II, and used the system in 2021. However, the statistics on access to SIS II by EU Agencies are not included in the scope of this document, as it only covers access by Member States.

 $<sup>^{\</sup>rm 2}$  Ireland and Norway also performed AFIS searches on a limited scale, less than 10 searches in the year.

#### Figure 1: Breakdown of 2021 SIS II access per Member State

Figure 2 shows **the trend in searches** performed by Member States in SIS II in the last five years. The sharp drop caused in 2020 by the COVID-19 crisis stands out against the steady increase visible in the previous years. In 2017, there was an increase of 30% compared to 2016; in 2018 the increase was 20%; and in 2019 it was 8% compared to the previous year.

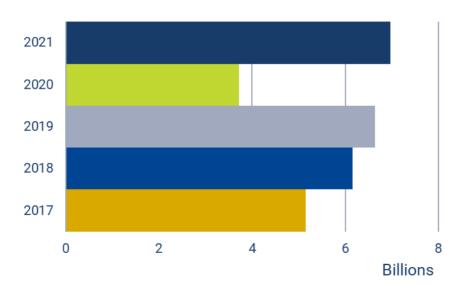

Figure 2: Member State searches in SIS II by year, 2017-2021

### 1.1 Searches per Member States

Member States report two types of searches:

• **Manually processed searches** are defined as searches (queries) involving human intervention, e.g. searches by staff using radios, telephones, computer terminals, document scanners and other forms of traditional search where a user makes the decision to carry out a search.

• **Automatically processed searches** happen without any human intervention, e.g. searches carried out by automatic number plate recognition systems (ANPR) or other types of automated bulk searches.

A breakdown of manual and automated searches is provided in Table 3<sup>3</sup>.

Member State	Manual searches	Automated searches	Total searches

Figure 3: Breakdown of 2021 SIS II searches per Member State<sup>4</sup>

<sup>&</sup>lt;sup>3</sup> Belgium reported that even though the ANPR has been in use for some time already by both the federal and local police, in 2021 additional cameras were installed, considerably increasing the number of searches performed. The Netherlands reported that since 01 January 2021, the SIS is searched by ANPR cameras. This produced 2.3 billion searches more than in the previous year. Norway reported that the changes in the case management system implemented in 2021, coupled with the modification of a national law in relation to dual citizenship, resulted in an important increase of searches compared to 2021. <sup>4</sup> Some Member States did not provide the breakdown of searches, but only the total number. This implies that the *total of manual searches* and the *total of the automated searches* are only partial (and their sum does not provide the totality of searches).

Not all Member States provided a breakdown of searches. This was not possible for Austria, Estonia, Germany, Portugal and Switzerland.

Five Member States reported a decrease in searches compared to 2020 (Denmark, Finland, Liechtenstein, Lithuania and Switzerland). However, 23 countries still reported less searches in 2021 compared to 2019 pre-COVID levels, probably due to the ongoing reduced passenger traffic at borders caused by the pandemic restrictions.

It is complex to compare Member States when it comes to the usage of SIS II. This depends on many factors, including the definition of business processes and workflows. Furthermore, each Member State has its own crime level, and geographical situation which determine the number of border crossing points and the length of the external land borders. Figure 4 shows the SIS II searches per Member State/per 1 million inhabitants.

Data on population refers to 2021 public Eurostat data<sup>5</sup>.

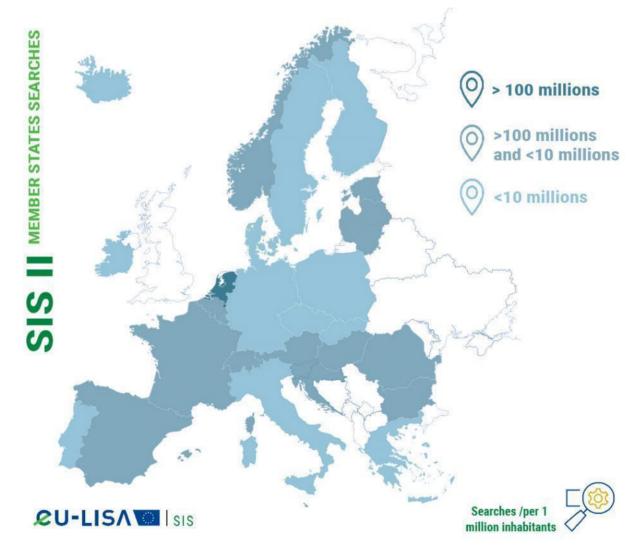

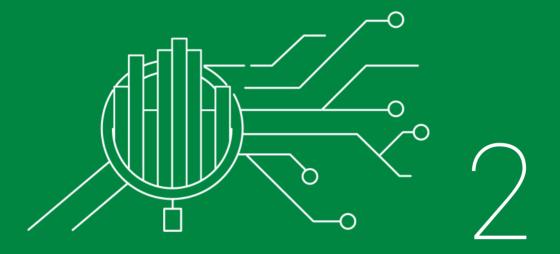

Figure 4: SIS II searches per Member State/per 1 million inhabitants

Eurostat aims at collecting from the EU Member States data on population on 1 January. The recommended definition is the "usually resident population" and represents the number of inhabitants of a given area on 1 January of the year in question (or, in some cases, on 31st December of the previous year). However, the population transmitted by the countries can also be either based on data from the most recent census adjusted by the components of population registers.

<sup>&</sup>quot;Usual residence" means the place where a person normally spends the daily period of rest, regardless of temporary absences for purposes of recreation, holidays, visits to friends and relatives, business, medical treatment or religious pilgrimage. The following persons alone are considered to be usually residents of the geographical area in question: those who have lived in their place of usual residence for a continuous period of at least 12 months before the reference time; or those who arrived in their place of usual residence during the 12 months before the reference time with the intention of staying there for at least one year.

## DATA STORED IN SIS II

## 2. Data stored in SIS II

On 31 December 2021, there were **89,999,229** alerts stored in SIS II. The table below (Figure 5) provides a breakdown of alerts per Member States for the different data categories.

Member State	Person	Vehicle	Aircraft	Banknote	Blank document	Boat	Boat engine	Container	Firearm	Industrial equipment	Issued document	Licence plate	Security	Vehicle registration document

Figure 5: Data in SIS II on 31 December 2021

Alerts on persons may be issued for the purpose of identifying persons sought for arrest or subject to surveillance or checks; persons who might not have the right to enter or stay in the EU or who are sought to assist with a judicial procedure; and missing persons (in particular children).

Alerts on objects may be issued:

- for discreet or specific checks, pursuant to Article 36 of the SIS II Decision on vehicles, boats, aircraft and containers;
- for the purpose of seizure or use as evidence in criminal proceedings, pursuant to Article 38 of the SIS II Decision on vehicles, boats, aircraft, trailers, caravans, industrial equipment, outboard engines, containers, firearms, blank documents, issued identity papers<sup>6</sup>, vehicle registration documents, banknotes and security<sup>7</sup>.

<sup>&</sup>lt;sup>6</sup> Issued identity papers such as passports, identity cards, driving licences, residence permits and travel documents, which have been stolen, misappropriated, lost or invalidated.

<sup>&</sup>lt;sup>7</sup> Securities and means of payment such as cheques, credit cards, bonds, stocks and shares, which have been stolen, misappropriated, lost or invalidated.

Alerts on persons represented 1% of the total amount of alerts stored; whereas the category *issued document* was still the biggest one, with over 75% of the alerts (see Figure 6 below).

The total amount of **data in SIS II decreased by 4% compared to 2020**. It should be noted that, on 1 January 2021 **eu-LISA implemented the Withdrawal Agreement of the United Kingdom from the EU**, and therefore the United Kingdom was disconnected from the central SIS II. The United Kingdom's data was first made unavailable, and deleted from the system later on. Over 5.7 million datasets/alerts were deleted from SIS II (6% of the total volume at that moment).

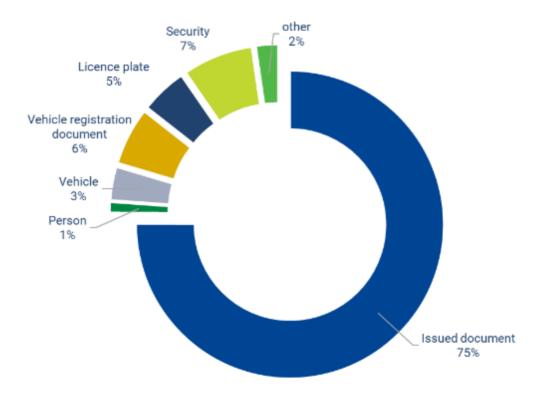

Figure 6: Breakdown of alerts per category on 31 December 2021

Compared to 2020, eight categories have reduced shares. The biggest decrease was registered by the category of *banknote* with a 62% reduction compared to the previous year. Six categories increased their shares, and in particular, the category *aircraft* registered an increase of 22%.

Figure 7 shows the total number of alerts stored in SIS II over the last 5 years, 2017-2021. A record level was reached at the end of 2020, with over 93 million alerts stored. The deletion of the United Kingdom's data at the beginning of 2021 impacted the overall volume. Conversely, the data stored by the 30 Member States using the system in 2021 increased by 2 million alerts compared to their level in 2020.

This confirms the steady increase of the number of alerts stored in the central SISI II on a yearly basis, visible since SIS II entered into operation back in 2013, with an average of 8% yearly increase.

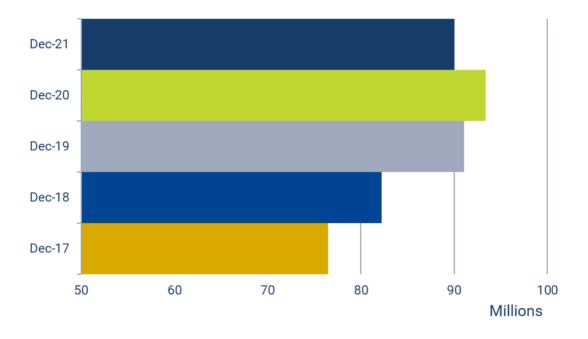

Figure 7: Alerts stored in SIS II by year, 2017-2021

### 2.1 Data per Member States

At the end of 2021, Italy was the Member State providing the majority of SIS II alerts, with over 24% of the total, followed by France (19%), Germany (13%) and Spain (9%). This is very similar to previous years. Figure 8 provides the total amount of alerts stored by each country.

**Ireland was connected to SIS II in March 2021**, and by the end of the year had more than 19,000 alerts, representing 0.02% of the total alerts stored.

Compared to the end of 2020, 17 Member States – Belgium, Bulgaria Croatia, Czech Republic, France, Germany, Greece, Ireland, Latvia, Liechtenstein, Luxembourg, the Netherland, Norway, Poland, Portugal, Slovakia, Sweden – saw a net increase in their alerts stored in SIS II.

Figure 8: Total alerts per Member State on 31 December 2021

As mentioned above, it is complex to compare Member States when it comes to the usage of the system as well as the amount of data stored. The latter depends on many factors, including the definition of business processes, workflows and national legislation. Figure 9 shows the SIS II alerts per Member State/per 1 million inhabitants.

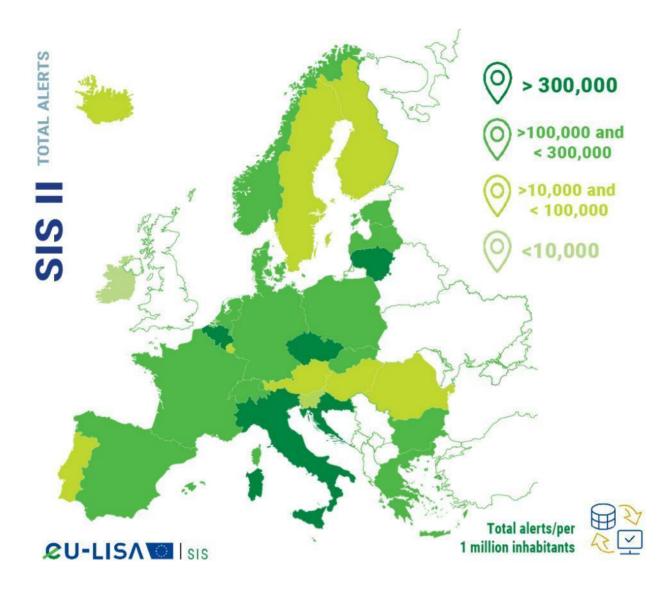

Figure 9: SIS II alerts per Member State/per 1 million inhabitants

#### 2.2 Alerts on persons

On 31 December 2021, there were **962,175 alerts on persons** stored in SIS II. Figure 10 provides a breakdown of alerts on persons.

Similar to the trend observed over the past few years, the majority of alerts (55%) were alerts issued pursuant to Article 24 of the SIS II Regulation (third country nationals to be refused entry or stay within the Schengen area).

Figure on cor pop

Figure 11 shows the SIS II alerts on persons, proportionally compared to Member State population.

## Type of alerts on persons

Alerts on persons can be created in SIS II for the following reasons:

- persons subject to arrest for surrender or extradition pursuant to Article 26 of the SIS II Decision;
- third country nationals to be refused entry into or stay within the Schengen area pursuant to Article 24 of the SIS II Regulation;
- missing persons (adults and minors) pursuant to Article 32 of the SIS II Decision;
- persons to assist with a judicial procedure pursuant to Article 34 of the SIS II Decision;
- persons for discreet or specific checks pursuant to Article 36 of the SIS II Decision.

# HITS REPORTED IN SIS II

## 3. Hits reported in 2021

In 2021, a total of **222,967 hits on foreign alerts** were reported via the SIRENE Bureaux. A breakdown of hits, per the alert generating it, is presented in the table below (Figure 12).

Hits on foreign alerts saw an **increase of 7% compared to 2020**. Compared to 2019 (pre-COVID levels) there was a decrease of 21%.

Hits on foreign alerts							
Hits on alerts Art. 26 SIS II Decision	9,777						
Hits on alerts Art. 24 SIS II Regulation	52,412						
Hits on alerts Art. 32 SIS II Decision	7,562						
Hits on alerts Art. 34 SIS II Decision	46,187						
Hits on alerts Art. 36 SIS II Decision	65,388						
Hits on alerts Art. 38 SIS II Decision	41,641						

Figure 12: Hits on foreign alerts

The share of hits per type of alert – see below figure 13 - are stable, and in line with the trend seen in the past years. The majority of hits are triggered by alerts pursuant to article 36 SIS II Decision, alerts on persons and objects for discreet or specific checks. Hits on alerts on persons still represents over three quarters of the total number of hits reported.

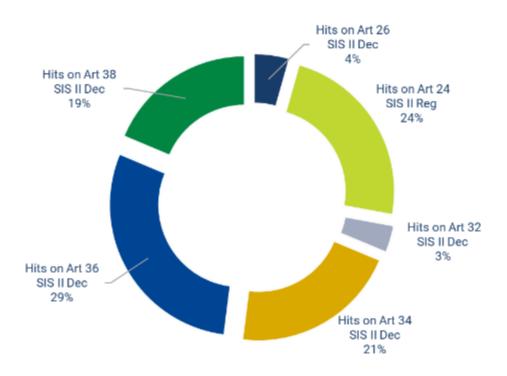

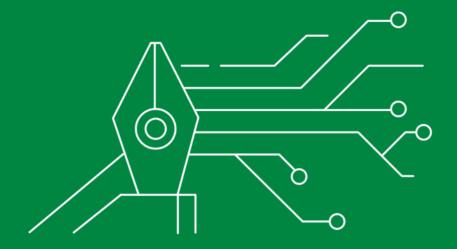

Figure 13: Hits on foreign alerts reported in 2021

# CONCLUSIONS

### Conclusions

SIS II usage, as visible in Figure 14, grew considerably in the last 8 years, with the exception of 2020, which was impacted by the restrictions imposed due to the COVID-19 pandemic. In 2021, searches and hits started increasing again, even though the majority of Member States still haven't got back to the amount of searches performed in the pre-pandemic period (due probably to reduced passenger traffic at borders).

In the last year, usage was impacted also by the United Kingdom's disconnection as from 01 January 2021, and Ireland's connection as from March.

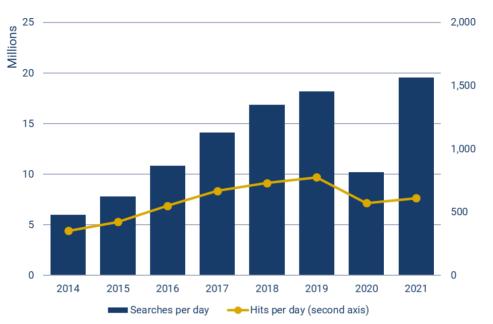

Figure 14: Average daily hits and searches, 2017 – 2021

Almost 20 million searches on average per day, performed by competent authorities all over Europe, and over 600 hits processed by the SIRENE Bureaux on average on a daily basis, are possible only with a robust system, which demonstrated once again to be at the heart of a secure Schengen Area.

### Annex

Corrigendum of the data included in the **SIS II – 2020 statistics** published<sup>8</sup> in March 2021.

The table below presents updated data for create/update/delete/change of expiry date.
