No. prev.doc.	9887/02 SIS 44 COMIX 394 9383/02 SIS 37 COMIX 366
Subject:	Extension of SIS II feasibility study to SIRENE

The SIS II feasibility study is meant to examine how the technical organisation of the SIS can be improved, to profit from the technical evolutions and to take account of the experience gained since the setting up of the SIS. For the same reasons, it was felt useful to examine in how far the handling of SIRENE data could be improved.

Therefore, it has been agreed that the SIS II feasibility study should cover how to ease the transmission and management of the SIRENE data and should examine where best these data might be stored, without implying that this should be on a central database and taking into account the legal and data protection issues.
